

Quality Scorecard

for Common Stocks

First Quarter 2017

atlcap.com

A quarterly reference guide for measuring trends in
the performance of high- and low-quality common stocks.

Table of Contents

Atlanta Capital's *Quality Scorecard* illustrates trends in the performance of high- and low-quality common stocks by market capitalization and style dimensions. The Standard & Poor's Earnings and Dividend Rankings are used to measure the financial quality of a company. These rankings evaluate the growth and stability of a company's earnings and dividends over the most recent 40 quarters. Atlanta Capital considers companies ranked B+ or Better, high-quality, and those ranked B or Below, low-quality.

Size Index Returns

- **Russell 1000® Index** measures the performance of the large-cap segment of the U.S. equity universe. It is a subset of the Russell 3000® Index and includes approximately 1,000 of the largest securities based on a combination of their market cap and current index membership.
- **Russell 2000® Index** measures the performance of the small-cap segment of the U.S. equity universe. It is a subset of the Russell 3000® Index and includes approximately 2,000 of the smallest securities based on a combination of their market cap and current index membership.

Style Index Returns

- **Russell 3000® Growth Index** measures the performance of the growth segment of the U.S. equity universe. It includes those Russell 3000® Index constituents with higher price-to-book ratios and higher forecasted growth values.
- **Russell 3000® Value Index** measures the performance of the value segment of the U.S. equity universe. It includes those Russell 3000® Index constituents with lower price-to-book ratios and lower expected growth values.

Quality Research Portfolio Returns

- **High Quality Research Portfolio** measures the performance of the high quality segment of the U.S. equity universe. It includes those companies in the Russell 3000® Index with Standard & Poor's Earnings and Dividend Rankings of B+ or Better. High Quality companies are deemed to have above average consistency and stability in earnings and dividends measured over the most recent 10 year (40 quarter) period.
- **Low Quality Research Portfolio** measures the performance of the low quality segment of the U.S. equity universe. It includes those companies in the Russell 3000® Index with Standard & Poor's Earnings and Dividend Rankings of B or Below and Not Rated. Low Quality companies are deemed to have below average consistency and stability in earnings and dividends measured over the most recent 10 year (40 quarter) period.

The High and Low Quality Research Portfolios were derived in part from the Russell Index Data . Frank Russell Company remains the source and owner of the Russell Index Data contained or reflected and all trademarks and copyrights related thereto.

About Atlanta Capital

Founded in 1969, Atlanta Capital is an investment advisory firm that specializes in managing high-quality stock and bond portfolios on behalf of institutional and individual investors. We invest in companies with a demonstrated history of consistent growth and stability in earnings. In fixed income, we emphasize securities with stable and predictable cash flows, and low credit and event risk.

Atlanta Capital operates as an investment boutique with three investment teams leveraging a central investment philosophy. Our growth equity, core equity and fixed income franchises offer both institutional and individual investors a broad range of high-quality stock and bond portfolios. We believe the longevity of our track records, some spanning over 20 years, is testament to our success in meeting our clients' investment objectives.

Today, the firm operates as an independent, majority-owned subsidiary of Eaton Vance Corporation, a Boston-based investment management company listed on the New York Stock Exchange. Twenty Atlanta Capital employees retain approximately 13% equity interest in the firm. In November 2008, Eaton Vance and Atlanta Capital established a long-term incentive plan that enables its employees to expand their ownership interest in future years.

Important Additional Information & Disclosure

Quality Ranks. Standard & Poor's Quality Rankings are utilized to capture the long-term growth and stability of a company's earnings and dividends in a single measure. The High- and Low-Quality research portfolios are provided to compare the aggregate of all companies with above average S&P Quality Rankings (B+ or Better) to those with below average S&P Quality Rankings (B or Below and Not Rated). The High- and Low-Quality research portfolios are model portfolios formed and rebalanced monthly by Atlanta Capital. The universe includes all constituents in an Index with S&P Quality Rankings and prices greater than \$1. The research portfolios were derived in part from the Russell Index Data. Frank Russell Company remains the source and owner of the Russell Index Data contained or reflected and all trademarks and copyrights related thereto. Rates of return are calculated using a market capitalization weighted-methodology and do not include transaction costs, management fees or other expenses incurred by managed accounts. Performance during certain periods reflects strong stock market performance that is not typical and may not be repeated. Indexes are unmanaged and it is not possible to directly invest in an index. The material is based upon information that Atlanta Capital considers to be reliable, but Atlanta Capital does not warrant its completeness, accuracy or adequacy, and it should not be relied upon as such. This information is provided for information purposes only and is not intended to be and should not be considered investment advice. The opinions expressed herein may change at any time without prior notice, and there is no guarantee that any forecasts or opinions expressed in this material will be realized. Reproduction or redistribution of the material in any form without express permission from Atlanta Capital is prohibited. Past performance does not predict future results.

Heat Maps. A nine-square style map is used to show the investment performance of high-quality stocks versus low-quality stocks for various periods. The Standard & Poor's Earnings and Dividend Rankings are used to measure the financial quality of a company. These rankings evaluate the growth and stability of a company's earnings and dividends over the most recent 40 quarters. Companies ranked B+ or Better are considered high-quality. Companies ranked B or Below are considered low-quality. To calculate the data, companies in the benchmarks identified below are sorted by rankings and formed into high- and low-quality research portfolios by Atlanta Capital and rebalanced monthly for each of the nine style boxes. Performance data (price change plus dividends) is market capitalization weighted. The monthly values are linked to calculate performance for longer periods. The value plotted for each square represents the total return of high-quality stocks less the total return of low-quality stocks. Thus, negative values show that low-quality stocks outperformed high-quality stocks and positive values show that high-quality outperformed low-quality.
